

Microsoft Dynamics NAV 2016 came pre-packed with Extensions and thereafter, in December 2016, Microsoft announced Extension 2.0.

Extensions, how to develop them and how to use Visual Studio Code will be a game changer for anyone who wants to participate in Dynamics 365 Business Central and Dynamics NAV business in the future. Microsoft not only pushes Extensions and Events-driven development over old-school customizations, but also Extensions are now the only way to have your solution on Dynamics 365. Extensions will also dramatically reduce maintenance and distribution efforts for your solution.

2 days getting hands-on Extensions

During a 1ClickFactory-designed two-day Extensions 2.0 development for D365 Business Central workshop, developers will get acquainted with the general concepts of creating NAV Extensions in Visual Studio Code. This extensive workshop will cover:

Day 1

- Introduction to Extensions
- Considerations when to use Extensions
- Events-driven NAV Development
- Mindset for NAV Extensions development
- Developing extensions for on-premises vs D365
- Overview of AL development language (and differences from C/AL) with NAV Development
- Setting up an environment for Group Development of Extensions 2.0
- Extension Manifest and packaging additional resources to extension
- Data handling when extension is installed
- Development with Extensions 2.0 toolkit
- Web services

Day 2

- Best practices for building modern user experience in Dynamics NAV
- Azure functions for .NET replacement
- How to get ready for Microsoft AppSource

Requirements for attendees: It is a prerequisite for participants to have at least 3 years of C/AL Development experience, to understand the concept of events and to be familiar with Extensions 1.0.

Workshop outcome: Participants will leave the workshop with a clear view on how to add functionality to Microsoft Dynamics deployment by building extensions for NAV.

Get a head and start investing in your Extensions knowledge today: it is your way to enhance NAV and to differentiate in the market!

“Columbus is a Global company: we have developed quite many solutions, and of course developing extensions is an important topic for us: we were eager and excited to dive deep and figure out Extensions 2.0 capabilities as well as limitations. And we are always seeking to be pioneers in the market: joining the workshop and learning from the ones who have experience already is one of the fastest ways to get on board”
T.Tiirats, Dynamics NAV developer, Columbus Eesti, Estonia,

“Extensions is not just the only way to get your IP on the Microsoft AppSource: they are the future for many pain points we have today. The competition in Poland, just like in all other markets, is huge therefore we are constantly investing in gaining knowledge so that we prepare ourselves and stay ahead of the competition” P.Podgorni, Project Manager, IT Vision, Poland

“Is it too early to dive deep into Extensions? Even though it is true there are still lots of limitations, having in mind the speed Microsoft is approaching the market, Extensions will be fully capable in no time. And when this happens, we want to make sure we are ready for them.” B.Siia, Senior NAV Developer, XAPT, Romania

About 1ClickFactory

Being a Dynamics solution provider today can be an opportunity or a challenge. Your business is challenged by new business models, technologies, competitors, growth, etc. In all, it's a constantly changing world that is difficult to navigate and create more profitability with less risk and lower investments. [1ClickFactory](#) helps Partners efficiently update, deploy, transform, develop and certify solutions for Microsoft Dynamics.
